FATAL DRUG POISONINGS, ALL DRUGS, % CHANGE

| Geographic Area | 12-month period ending April 2023 | 12-month period ending April 2024 | Percent change | Lowest value since |
|------------------|-----------------------------------|-----------------------------------|----------------|--------------------|
| NY Rest of State | 3634 | 3133 | -13.79% | February 2021 |
| NY City | 3278 | 3067 | -6.44% | November 2022 |
| NY State Overall | 6912 | 6200 | -10.30% | N/A |
| United States | 112,470 | 101,168 | -10.05% | June 2021 |

There are 712 more New Yorkers still with us than if these changes had not occurred; but every life is precious, and there is still much work to do

FATAL DRUG POISONINGS, SOOTM*, % CHANGE

| Geographic Area | 12-month period ending April 2023 | 12-month period ending April 2024 | Percent change | Lowest value since |
|------------------|-----------------------------------|-----------------------------------|----------------|--------------------|
| NY Rest of State | 2793 | 2415 | -13.53% | July 2021 |
| NY City | 2616 | 2453 | -6.23% | November 2022 |
| NY State Overall | 5409 | 4868 | -10.00% | N/A |
| United States | 78273 | 68845 | -12.05% | September 2021 |

*SOOTM: synthetic opioids other than methadone (largely fentanyl)

FOOTNOTES: [HTTPS://WWW.CDC.GOV/NCHS/NVSS/VSRR/DRUG-OVERDOSE-DATA.HTM](https://www.cdc.gov/nchs/nvss/vsrr/drug-overdose-data.htm)

NOTES: *Reported* provisional counts for 12-month ending periods are the number of deaths received and processed for the 12-month period ending in the month indicated. Provisional counts may not include all deaths that occurred during a given time period. Therefore, they should not be considered comparable with final data and are subject to change. *Predicted* provisional counts represent estimates of the number of deaths adjusted for incomplete reporting (see **Technical Notes**). Deaths in this report are classified by the reporting jurisdiction in which the death occurred and include foreign residents. Number of deaths in this report may not match final reported data, which are reported by the jurisdiction of residence and are limited to US residents. Jurisdictions are selected for inclusion in this dashboard if they have met the original three measures of data quality (a) overall percent completeness of reporting ($\geq 90\%$), (b) the percentage of records pending investigation ($\leq 1\%$), and (c) the percentage of overdose deaths with drug specified ($\leq 90\%$) for the six most recent 12-month ending periods as opposed to for the entire period starting with January, 2015. For jurisdictions not meeting quality measures for all periods starting with January 2015, predicted values are shown for all data points that meet percent completeness and drug specificity thresholds with reported values only shown for months where all three data quality measures were met. As a result, estimates are shown for selected reporting periods before the most recent 6 months and there may be gaps in the trends. Drug overdose deaths are identified using the International Statistical Classification of Diseases and Related Health Problems, Tenth Revision (ICD–10) underlying cause of death codes: X40–X44, X60–X64, X85, and Y10–Y14. Drug overdose deaths involving selected drug categories are identified by ICD–10 multiple cause-of-death (MCOD) codes: heroin, T40.1; natural and semisynthetic opioids, including drugs such as oxycodone, hydrocodone, and morphine, T40.2; methadone, T40.3; synthetic opioids, including drugs such as fentanyl and tramadol and excluding methadone, T40.4; cocaine, T40.5; and psychostimulants with abuse potential, including drugs such as methamphetamine, T43.6. Opioid overdose deaths are identified by the presence of any of the following MCODE codes: opium, T40.0; heroin, T40.1; natural and synthetic, and synthetic opioids, including methadone (T40.2–T40.4); and natural and semi-synthetic opioids, including methadone (T40.2–T40.3). These categories can be selected in the 'Select specific drugs or drug classes' drop-down menu above the chart. Categories are not mutually exclusive because deaths may involve more than one drug. Among deaths with an underlying cause of drug overdose, the percentage with at least one drug or drug class specified was determined using MCODE codes in the range of T36–T50.8.
