Note that requests for services under an Immediate Need still begin at the local departments of social services (LDSS), and the LDSS acts to coordinate the appointment scheduling through NYIAP. • Reassessments (routine and non-routine) have not transitioned to NYIAP. Reassessments were scheduled to begin rollout in January 2024 but have been delayed due to stakeholder and other concerns. As of September 2024, there are no updates to this implementation timeline. • Assessments for children have not transitioned to NYIAP.

<p>Disparities in Quality Care for New York’s Medicaid Population- Opportunities and Limitations</p>	<p>Key Findings</p> <ul style="list-style-type: none"> • Black Medicaid enrollees had more quality measures with statistically <i>lower rates</i>, compared to other racial, ethnic and sex subgroups. • The average number of quality measures with <i>lower rates</i> is significantly higher among Black male Medicaid enrollees compared to Black female enrollees, indicating sex disparity within the same racial/ethnic group. • When grouped by domain, Black Medicaid enrollees have the highest count of quality measures with statistically <i>lower rates</i> in the following domains: Adult Health, Behavioral Health, and Use of Services. However, Black Medicaid enrollees have more measures with <i>higher rates</i> in the Access to primary care domain compared to Asian Medicaid enrollees. • Hispanic and White female enrollees had the most quality measures with <i>higher rates</i> when compared to Black enrollees. <p>Other Research</p> <p>Ongoing federally funded research focused on Substance Use Disorder and Serious Mental Illness in Value Based Payment</p> <p><u>Ongoing Serious Mental Illness Study</u></p> <ul style="list-style-type: none"> ▪ Study period: 2014-2018 (2014-2016: pre-VBP; 2017-2018: post-VBP) ▪ Data source: NYS merged dataset (Medicaid data + VBP dataset + PolicyMap) <ul style="list-style-type: none"> ▪ VBP dataset: linked beneficiaries to PCPs and PCPs to providers & indicated if provider had VBP contract with beneficiary’s plan ▪ PolicyMap – area-level social disadvantage ▪ Study population: non-elderly, non-Dual Medicaid beneficiaries ▪ Outcomes: access, quality, effectiveness, costs ▪ VBP exposure: VBP coverage during 2-year post-VBP period (unexposed – none) ▪ Independent variables: <ul style="list-style-type: none"> ▪ Key: Interaction terms between indicators of VBP exposure and post-period, race/ethnicity ▪ Others: age, sex, health status, NYC vs. rest of the state residence, concurrent policies (PPS, Health Homes, HARP)
