MAPP HHTS Release 4.9 System Changes and Enhancements
Implementation: Late Nov 2025 (exact release date TBD)

A. New fields will be added to the MCP-HH Relationship Download and HH-CMA Relationship Download files to indicate when a HH or CMA's Category of Service (COS) 0265 *Case Management* has a COS status indicating that the provider needs to complete work with provider enrollment (COS Enrollment Statuses: '13' *revalidation due* and '14' *revalidation past due*).

B. New fields will be added to the Plan of Care Upload and Plan of Care Download files relating to the signature fields to allow providers to provide additional information about how/when the POC was signed. Initially this field will only be used when a member with an AOT order refuses to sign their POC but could be used for other situations in the future.

C. A new field showing an organizational contact status will be added to the Provider Contact Download file to indicate if a contact is *active*, *closed*, or *cancelled*. The Provider Active Users Download file will only return active contacts.

D. System optimization work that will increase system speed in returning download file results and search screen results.

E. The logic that determines how some fields on the Billing Support Download field are populated will be updated (the actual file specifications will not be updated). This logic update includes changes to the CEST related fields, so they are blank for populations that are excluded from the CEST policy.

F. Capture the filters applied to various files at the time the file download is requested. The system will display the selected filter information under file ID carrot on the download screen.
