

Elevated security standard for IT setup?

Hi everyone, I am fairly new to this role and was told that there is an elevated security standard for the network and/or servers that are used in the DSRIP program. I hadn't heard of this before outside of HITECH and HIPAA standards. Can someone please direct me to a resource that names and outlines this standard? Thanks! Jim

Or can someone let me know that if it even exists? Not sure how reliable that source is.

Jim,
There were several webinars provided on data security and information sharing. They are accessible on the DSRIP web site that is part of the Medicaid Redesign site. The link is below.

Hey Jim, you're right that security regarding the treatment of DOH Medicaid claims data is elevated to include NYS standards including and beyond HIPAA and HITECH. Thanks to Kevin for sharing the link. We have quite a bit of up-to-date information on the DSRIP website under the "Data Security and Information Sharing" section of the "Providers and Professionals tab." Also, you might consider joining the Data Security Workgroup, or corresponding with your PPS colleagues who may already have joined. If you'd like to join, please email me at logan.tierney@health.ny.gov.
