

How has the guidance "Actively Engaged Counting Methodology_FINAL.pptx" changed your approach?

Since we now have clearer guidance from the State on uniform methods for calculating S&S, what are you doing differently? Are you starting from scratch?

The biggest challenges I see are:

- Changing the base assumptions under which the initial analyses were performed and updating earlier analyses so they conform to the newly "standardized" methodologies;
- Communicating those changes quickly enough to be able to amend narratives due on December 22nd.
