

Domain 2 & 3 Project Application Question

Hello All,  
Each Domain 2 and 3 project application requires applicants to list the name of all providers selected for a project with their NPI numbers. On the prototype application, just the main PPS hospital was listed as the provider selected for each project; I've attached a snip of the prototype application here. Is this how actual applicants should be filling out this table or is a full list of participating providers and NPI numbers required?  
Thanks!

[Application](#) [Domain 2](#) [Domain 3](#) [Partners](#) [Providers](#)

Hi Meghan,  
Thanks very much for your question. The Prototype Application was intended to be an indicative example response to the application and, in the specific table you're referring to, that meant just showing the name of one of the provider organizations in 'Forestland PPS' as opposed to a full list of organizations. In reality, as you rightly suggest, a real PPS would have listed all the providers participating in the given project, along with their NPI numbers.  
However, following the public comment period, the Independent Assessor has changed this particular part of the project applications, so that this table will no longer be included. You can see the latest "redline" version of the project applications here:
