

Project 3.b.i (Evidence-based Strategies for Disease Management)

Project 3.b.i of DSRIP focuses on evidence-based strategies for disease management in high risk/affected adult populations. **Ashley Meskill of Suffolk Care Collaborative recently posted a request for greater collaboration and knowledge sharing on Project 3.b.i across different PPSs, and also proposed the idea of monthly inter-PPS calls on the topic of 3.b.i.** If you are interested, you can reach her at Ashley.Meskill@stonybrookmedicine.edu.
If your PPS is working on project 3.b.i, we invite you to collaborate with your fellow PPSs and share some challenges, best practices, and other ideas related to this important project. **Join this conversation thread and contribute to the discussion!**

3.b.i

Dear NYS DSRIP Team,
Thank you for re-posting my request to collaborate with other PPSs on a monthly call. So far I have not had anyone reach out or show interest in collaboration. Please email me if you are interested and I will set up a recurring monthly call. Thanks in advance.
All the best,
Ashley Meskill

Dear Ashley,
I would be happy to participate in inter PPS monthly calls to collaborate and share ideas related to Project 3.b.i. I am Millennium Collaborative Care's Project lead for this project and will reach out to you via email. Thanks.

Hi Ashley,
The Mount Sinai PPS is interested in attending. Sending you an email to connect.
Warm regards,
Agnes

Hi Ashley! I would be interested in participating. I am the project manager for this project at the BPHC PPS

By [Caitlin Verrilli](#), 3 months ago 2

Hi All! I have previously spoken with Ashley off-line but wanted to introduce myself to the group on the MIX. I am the project manager for 3.b.i at Care Compass Network PPS and I look forward to collaborating with all of you on this project.
Regards,
Rick

I am curious to hear how others have or plan to demonstrate the 'Engaged Patient' documentation for this project. Since self-management goals are frequently documented in the Notes section of the EHR, it doesn't lend itself to easily running reports.

Caitlin, Developing a 'query' for actively engaged has been very difficult. We have gotten the same feedback. This data is not captured in a format that would lend itself to creating a query. In addition, even if there are 'radio buttons' in the EHR for various 'self management goals' , not all clinicians are recording the data in the same way, and there is still documentation in the Notes section. Finally, designing a query to capture this data in one system, does not mean that it can be replicated in another EHR. I'd like to see how others have approached capturing Self Management goals for the 'Actively Engaged' reports.
