DSRIP QUARTERLY REVIEW PROCESS:

PPSs will submit a quarterly report to the Independent Assessor throughout the DSRIP program via the automated MAPP tool which includes Domain 1 DSRIP Project Requirement Milestone and Metrics. Each Project Requirement includes the time period for completion as well the unit level of reporting which are discussed in further detail below.

Project Requirement - Timeframe

PPSs must enter a target completion date against all Project Requirements Milestone and Metrics. Each Project Requirement has been assigned to one of three time periods for completion. Dates cannot exceed the prescribed time period of speed and scale commitments made in the submitted application (this includes prescribed minimum time periods beyond PPS Application Speed and Scale Commitment). Each of the following requirement sections is similarly color-coded throughout the document.

<u>Project System Changes:</u> Based upon the work plan section in Attachment I, NY DSRIP Program Funding and Mechanics Protocol, no more than the first two years will be utilized to implement major system changes related to the project. Example project requirements that fall into this time period cohort include: training for care coordinators, developing systematic approaches like clinical protocols, the identification of key project personnel, performing population health management activities, or using EHRs or other technical platforms to track patients engaged in the project.

<u>Project Requirements with Specific Time Periods</u>: A number of project requirements include prescribed end dates for achievement. Example project requirements include: safety net providers actively sharing medical records with RHIO/SHIN-NY by the end of DY 3 or PCPs achieving Level 3 PCMH certification by the end of DY 3.

<u>Project Requirements Tied to PPS Speed and Scale Commitments</u>: The due dates for these project requirements are at the discretion of the PPS and should be consistent with commitments each PPS made in the speed and scale sections of the submitted project application. Project requirements within this time period include components like implementing open access scheduling in all PCP practices, deploying a provider notification/secure messaging system, or converting outdated or unneeded hospital capacity into needed community-based services.

Project Requirement - Unit Level Reporting

Project Unit Level Reporting

Project-Unit Level Reporting - These are Domain 1 requirement metrics/deliverables which will be reported by the PPS lead at the project-wide level demonstrating the PPS' overall project performance and success. These are requirements not specific to individual provider but rather are requirements that must be organized and administered by the PPS lead through the PPS' participating providers and partners. Some of these requirements include performing population health management activities, monthly meetings with MCOs, establishing partnerships between primary care providers and participating Health Homes, and developing materials meeting the cultural and linguistic needs of the population.

Provider Unit Level Reporting

Provider-Unit Level Reporting - These are Domain 1 requirement metrics/deliverables for which performance and success must be demonstrated at the provider level. Some of these requirements include PCPs meeting 2014 NCQA Level 3 PCMH standards, EHR meeting RHIO HIE and SHIN-NY requirements or implementing open access scheduling in PCP practices.
