## Statewide BLS Protocol Change Log V.25.1 Effective 07.01.2025

### Statewide BLS Protocol Change Log from v25.0 to v25.1

The following changes were made in accordance with motions approved at the May 7, 2025 SEMAC and SEMSCO meetings.

#### **(5.0) Resources**

##### **Oxygen Administration and Airway Management**

- Updated wording under EMT related to Supraglottic airway which removes “adult” and allows for placement in both adult and pediatric patients in cardiac arrest.
  - “Supraglottic airway placement<sup>‡</sup> in cardiac arrest patient (as regionally approved)”

<sup>‡</sup> Refers to “If equipped and trained.” This indicates the intervention(s) may be performed if an agency or region chooses to implement the intervention and the practitioner is trained to the standard of the agency or region and has the intervention (medication, equipment, etc) available to them during the course of patient care. These are not required.
