

Be PrEPared. **Be bold.** Take control of your sexual health.

PrEP is for women like me!

PrEP is a medication that prevents HIV

It's safe and effective medication that prevents HIV. You can choose from a daily pill or a long-acting injection. PrEP is for all women who are at risk of HIV infection.

PrEP is for you if:

- You have condomless sex with a partner(s) whose HIV status is unknown
- You are in a long- or short-term, committed relationship
- You have been diagnosed with a sexually transmitted infection (STI) in the past 12 months
- You are involved in transactional sex. Or if you have a sex partner(s) who may be involved in transactional sex. In other words, they trade sex for money, drugs, food, or housing
- You share needles or injection supplies

Most insurance and New York State Medicaid plans cover PrEP. Also, you may be able to get help to pay less for PrEP.
