

Rabies Post-Exposure Prophylaxis (RPEP) Administration

NEVER PREVIOUSLY FULLY VACCINATED	<u>Vaccine</u>	<u>Vaccine</u>	<u>Vaccine</u>	<u>Vaccine</u> (if immunocompromised)
Day 0 Human Rabies Immune Globulin (HRIG): 20 IU/kg body weight. Vaccine: 1 ml IM in deltoid or, for small children, in anterolateral thigh.	Day 3 1 ml IM	Day 7 1 ml IM	Day 14 1 ml IM	Day 28 1 ml IM

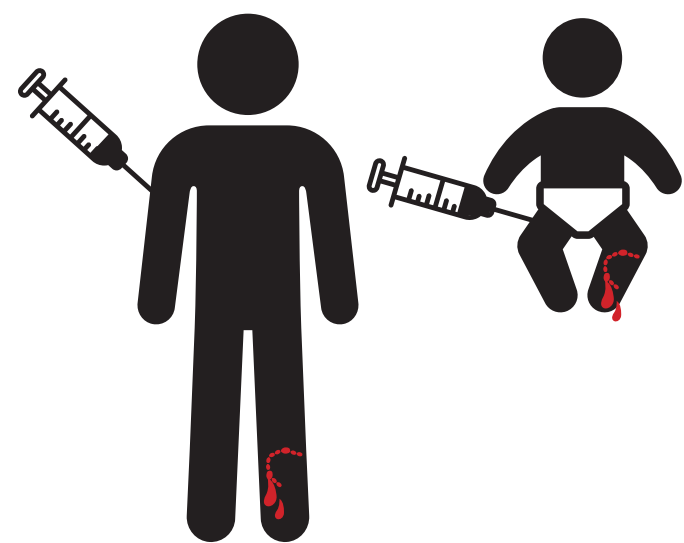

- Infiltrate as much HRIG as anatomically feasible into and around wound or site of animal contact.
- Give any remaining volume IM at a site distant from vaccine site.
- For mucous membrane exposures, give full dose IM distant from vaccine site.

PREVIOUSLY FULLY VACCINATED

Day 0

Vaccine: 1 ml IM in deltoid or, for small children, in anterolateral thigh.
No HRIG

Vaccine

Day 3

1 ml IM

**DO NOT
GIVE RABIES
VACCINE IN
GLUTEAL
AREA.**
